

Warehouse Operations

Simplifying Your Processes By Improving Visibility

DEX Systems' Warehouse Operations software solution automates and optimizes all warehouse and inventory management functions. The software simplifies processes, improves visibility, drives faster processing times, increases accuracy, and enables superior inventory control. The solution streamlines picking, packing, shipping, kitting, and order fulfillment processes. An intuitive user interface accelerates processing of all warehouse management activities. The Warehouse Operations solution provides bar code scanning capabilities, cost tracking, cycle count capabilities, serial level control, and pallet and bulk processing.

Features

- Order management & order fulfillment
- Inventory control
- Serial level tracking
- Pick/Pack/Ship
- Kitting & Cross-Docking
- Bar code integration
- Single item or bulk processing
- Freight/transportation system integration

The DEX Systems Warehouse Operations solution is part of the DEX Systems family of solutions, a cloud-based or on-premise software platform designed to manage and control all aspects of your after sales supply chain. Whether you implement a single solution at a time or the entire platform, DEX Systems helps simplify your operations, while enabling informed decisions that result in greater productivity, cost reductions, and improved customer satisfaction.
